- **Resistance (R):** Higher resistance decreases current flow.
- **Conductivity of the Material:** Materials with high conductivity (like copper) allow more current to flow.

Study Answer:

Electric current is directly proportional to voltage and inversely proportional to resistance. Adjusting these factors changes the current in a circuit.

3. Ohm's Law and Its Application

Ohm's Law states that the current flowing through a conductor between two points is directly proportional to the voltage across the points and inversely proportional to the resistance:

$$I = V / R$$
