- Aim for the recommended idle speed specified in your Yamaha Breeze manual, typically around 1500-2000 RPM.

5. Adjust the Mixture Screws

The Mikuni VM18SH has two main mixture screws:

- L (Low-speed mixture screw)

- H (High-speed mixture screw)

Procedure:

- Turn the L screw clockwise gently until it seats lightly (do not overtighten).
- Turn it counterclockwise about 1 to 1.5 turns as a starting point.
- Start the engine and adjust the L screw for the highest, smoothest idle.
- Repeat the same process with the H screw:
- Turn H screw clockwise until lightly seated.
- Turn counterclockwise 1 to 1.5 turns.
- Adjust for maximum RPM and smoothness at high throttle.

Note: Always make small adjustments (1/8 turn at a time) and allow the engine to stabilize before making further changes.

6. Fine-Tuning and Testing

- After initial adjustments, rev the engine gradually from idle to full throttle.
- Observe engine response:
- If the engine bogs or stalls at high RPM, lean the H screw slightly clockwise.
- If the engine sputters or stalls at low RPM, richen the L screw slightly counterclockwise.
- Recheck idle speed and adjust if necessary.

7. Final Checks

- Ensure the throttle operates smoothly without sticking.
- Confirm that the carburetor is securely mounted.
- Reinstall the air filter and any other components.
