- **Identify mistakes:** If your answer doesn't match, analyze where you went wrong.
- **Practice similar problems:** Reinforce learning by practicing additional problems on similar topics.

Sample Workbook Problems and Their Answers

Below are some typical problems from Envision Math 4 Topic 13, along with detailed explanations and answers.

Problem 1: Long Division with a Two-Digit Divisor

Question: Divide 1,248 by 36.

Solution Steps:

- Estimate how many times 36 fits into 1,248.
- $36 \times 30 = 1,080$; $36 \times 34 = 1,224$; $36 \times 35 = 1,260$ (which is too high).
- Since $36 \times 34 = 1,224$, subtract 1,224 from 1,248: $1,248 - 1,224 = 24$.
- The quotient is 34, and the remainder is 24.

Answer: 34 R24

Additional note: Expressed as a decimal, the quotient is approximately 34.66 (since $24 \div 36 \approx 0.66$).

Problem 2: Word Problem Involving Division

Question: A school has 1,200 pencils that need to be equally distributed among 50 classrooms. How many pencils does each classroom get? Are there any pencils left over?

Solution:

- Divide 1,200 by 50.
- $50 \times 24 = 1,200$.
- No remainder.

Answer: Each classroom gets 24 pencils; there are no leftovers.

Problem 3: Remainders in Context

Question: A farmer has 1,050 apples to pack equally into boxes of 48 apples each. How many boxes can the farmer fill completely? How many apples are left unpacked?

Solution:

- Divide 1,050 by 48.
- $48 \times 21 = 1,008$; $48 \times 22 = 1,056$ (which is too high).
- Subtract: $1,050 - 1,008 = 42$ apples left over.

Answer: The farmer can fill 21 boxes completely; 42 apples remain unpacked.

Strategies for Solving Long Division Problems

Mastering long division requires practice and understanding of certain strategies:

- **Estimate First:** Before dividing, estimate how many times the divisor fits into the dividend to guide your calculation.
- **Divide Step-by-Step:** Break the dividend into parts and divide each step carefully, aligning digits properly.
- **Multiply and Subtract:** After estimating, multiply the divisor by the quotient digit and subtract from the current dividend segment.
- **Bring Down Next Digit:** After subtraction, bring down the next digit and repeat the process.
- **Check Your Work:** Multiply the quotient by the divisor to verify if you get the original dividend or a close approximation.

Common Challenges and How to Overcome Them

Many students find long division challenging, but with practice, these difficulties can be addressed.

1. Misalignment of Digits

- Ensure digits are properly aligned when setting up problems.
- Use graph paper or lined paper to keep columns straight.

2. Forgetting to Bring Down Digits

- Develop a routine to always bring down the next digit after each subtraction.

3. Handling Remainders

- Decide whether to express remainders as fractions, decimals, or whole numbers based on the problem context.
